

Using "Translations tab" in Hopin as a speaker

Using translation/interpretation widget

In a session which has enabled interpretation:

To the right there is a tab where you can choose "Translations" to hear an interpreted audio track.

Auto volume setting

Auto-volume enables the users to always listen to the same language, whether it is the interpretation or the original meeting sound in the same language.

For example: If someone selects Spanish under Translations tab and clicks "CONNECT", when the meeting is in English they will hear the Spanish interpretation and when the meeting is in Spanish they will hear the speakers speaking in Spanish.

By this way, they can follow the meeting through the translation widget.

WARNING FOR SPEAKERS

- If any speaker is using Interpretation, when they will speak, they should click on the orange "DISCONNECT" button in Interpretify widget under Translation tab.
- Therefore, they won't hear themselves. When they are done speaking, they should click on "CONNECT" to resume hearing the meeting sound or interpretation in their language.
